

**INTERNATIONAL CONSTRUCTION CONTRACTS
AND DISPUTE RESOLUTION -
THE EXAMPLE OF THE FIDIC CONDITIONS OF CONTRACT
CERTIFICATE PROGRAMME**

2-11 March 2017

Elliott Geisinger, *Schellenberg Wittmer, Geneva*
President, Swiss Arbitration Association
Philippe Bärtsch, *Schellenberg Wittmer, Geneva*

Istanbul Bilgi University, Faculty of Law will present a certificate program in English regarding International Construction Contracts and Dispute Resolution to be held by Elliott Geisinger, President of the Swiss Arbitration Association and Philippe Bärtsch.

The nature of large-scale, international construction projects has resulted in international construction contracts having particular features that differentiate them from other commercial contracts. Standard forms of contract have developed which reflect best practices in the construction industry. Along with these forms of contract, the construction industry has favoured special methods of resolving the disputes arising out of a construction project. This six-day course will be divided into three parts.

The first part of the course will explore the nuts and bolts of international construction contracts. We will begin by looking at the various entities involved in a construction contract and how a typical construction project progresses from start to finish. We will also briefly look at selected other ways of structuring construction contracts. The course will also address briefly the implications of the law applicable to the contract. We will then go on to look at standard form international construction contracts and examine the most widely used standard form - the FIDIC Red Book.

The second part of the course will provide an overview of the dispute resolution methods adapted to international construction contracts. In particular, this part of the course will begin by examining the procedure for resolving disputes under the FIDIC Red Book as well as the final determination of disputes by ICC arbitration.

The third part of the course will cover a set of selected issues that typically arise in international construction projects. For each selected issue, the course will provide an overview of the main sub-issues involved, examine certain practical matters and describe how they are regulated in the FIDIC Red Book. Then, for each issue, the course will describe how these matters are typically handled in arbitration. The selected issues are: time and delays; price, payment and variations; defects; and termination of the contract.

Lectures will be presented 2-3-4 March and 9-10-11 March at the Dolapdere Campus. The lectures on 2,3,9 and 10th of March will take place between 17.00-21.00 and on 4th and 11th of March between 09.30-13.30. A certificate of attendance shall be given to participants who have attended the full program.

All lecture materials are in English and the participants will access the materials online with a password provided after registration.

Registration:

For registration:
evrim.ozbek@bilgi.edu.tr
